

EMQX File Transfer Response Duplication

Ilya Averyanov

2023

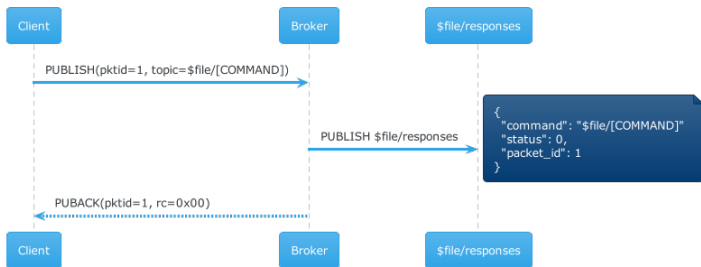

Response Duplication Why Needed?

- ▶ Not suitable for all cases, like MQTT bridging
- ▶ Not all client libraries have or have good support for QoS 1 PUBACKs

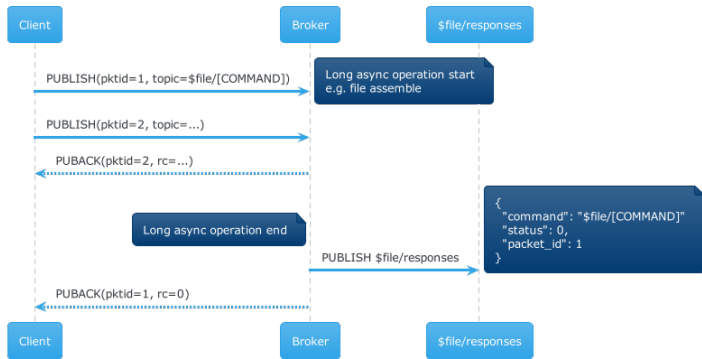

Response Duplication Simple Case

Response Duplication

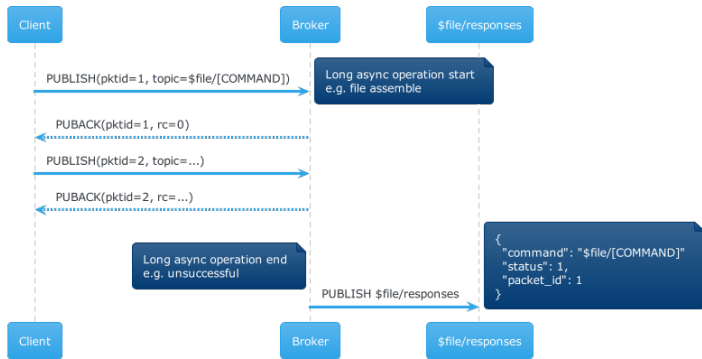

Async Case, Variant 1

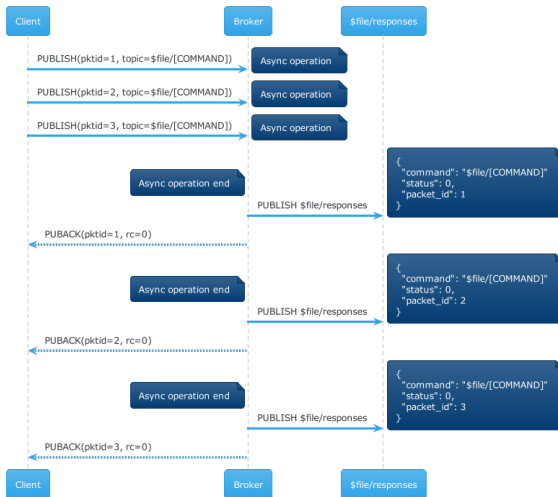

Response Duplication

Async Case, Variant 2

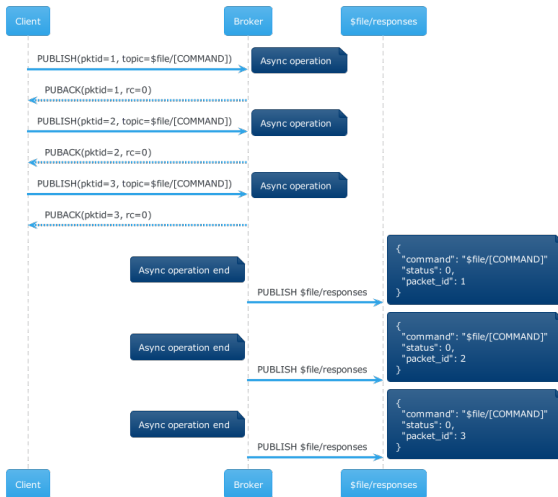

Response Duplication Multiple Async Case, Variant 1

Response Duplication

Multiple Async Case, Variant 2

Response Duplication: Q Flow Options

Which flow options should we support?

- ▶ Async PUBACK (implemented)
- ▶ Async PUBACK + PUBLISH to Topic
- ▶ Sync PUBACK ($rc = 0$) + PUBLISH to Topic

Response Duplication Async PUBACK

- ▶ The Variable Header component of many of the MQTT Control Packet types includes a Two Byte Integer Packet Identifier field
- ▶ For "AWS-friendly" FT we may have thousands of async PUBLISHes
- ▶ We have only 65536 packet identifiers

Response Duplication: Q

Default topic scheme for responses

- ▶ `$file/[FILEID]/response`
- ▶ `$file/response`
- ▶ Other variant?

For custom topics, we support REQUEST/RESPONSE topic scheme. Should we support custom default response topic scheme in config?

Thank you!
